

Amendment
U.S. Patent Application S.N. 10/713,418
Page 2 of 9

In the specification, please amend the paragraph beginning on page 4, line 13, to the following:

The engaging arm 20 has a top surface including front and rear ramps 26, 28, which are collinear, and a trough 30 between the two ramps 26, 28. The trough 30 has substantially straight front and rear walls and defines an upward opening. Both of the ramps 26, 28 terminate short of that upward opening in a vertical plane, leaving the upward opening free to receive the front face of the cabinet, so the trough receives and abuts the front face of the cabinet and stops the travel of the drawer both when the drawer is opening and when the drawer is closing. As is explained in more detail later, the trough 30 has a depth which permits it to engage the front face of the cabinet 34 (see Fig. 3). The top surface of the front ramp 26 tapers from a lower elevation in front to a higher elevation in back, where it meets the trough 30. The top surface of the rear ramp 28 tapers from a higher elevation in front, where it meets the trough 30, to a lower elevation in back.
